當代理式 AI 遇見實體 AI

親愛的各位來賓、學者與朋友們：歡迎蒞臨 TAAI 2026！第 31 屆人工智慧技術與應用國際研討會（TAAI 2026）將於 2026 年 11 月 20–21 日在新北市三峽區的大板根森林溫泉酒店舉行，由中華民國人工智慧學會與國立臺北大學共同主辦。能在森林環繞的場域與大家相聚，是本屆大會特別的地方。

本屆以「代理式 AI（Agentic AI）與實體 AI（Physical AI）的跨域永續創新」為主題。當 AI 從回答問題，走向自主規劃、使用工具並完成任務，又進一步走入機器人、感測與真實世界，我們需要的不只是更強大的模型，更是跨領域的合作，以及對永續與可信賴 AI 的共同承諾。

為此，大會邀請四位傑出的主題演講講者：美國伊利諾大學芝加哥分校的 Philip S. Yu 教授、中央研究院的曹昱研究員、加拿大西門菲莎大學的 Ljiljana Trajkovic 教授，以及日本大阪大學的 Kazunori Komatani 教授，從圖基礎模型、語音、網路安全到對話系統，分享前沿觀點。

兩天的議程涵蓋國際與國內論文的口頭及海報發表、產業軌道、特別場次、青年女性之星、高中生場次、AI CUP 與 NAPAI Agentic AI 校園創新競賽，以及國際與國內座談，期盼為學界、研究機構、產業與下一代人才，創造深入交流與合作的機會。

TAAI 自 1995 年起持續舉辦，是臺灣歷史最悠久的人工智慧學術會議之一，並與日本人工知能學會（JSAI）進行雙邊交流；國際論文組的論文集由 Springer CCIS 出版。這份傳承屬於每一位作者、審查委員、議程主席、籌備團隊與志工，我們由衷感謝大家的付出，也感謝指導、主辦、協辦、贊助與合作單位的支持。

誠摯邀請您善用這兩天：走進場次並勇於提問，在海報前多停留一會兒，在茶敘與晚宴中結識新朋友。願這片森林成為好點子相遇的地方。祝福大會圓滿成功，各位滿載而歸！

Where Agentic AI Meets Physical AI

Dear colleagues and friends, welcome to TAAI 2026! The 31st International Conference on Technologies and Applications of Artificial Intelligence takes place on November 20–21, 2026 at The Great Roots Forestry Spa Resort in Sanxia, New Taipei City, co-organized by the Taiwanese Association for Artificial Intelligence (TAAI) and National Taipei University (NTPU). Gathering among the forest makes this edition a little different.

This year's theme is Agentic AI and Physical AI for Sustainable Innovation. As AI moves from answering questions to planning, using tools, and completing tasks on its own, and then into robots, sensors, and the physical world, we need more than more powerful models: we need collaboration across disciplines and a shared commitment to sustainable and trustworthy AI.

To explore these questions we are honored to host four distinguished keynote speakers: Prof. Philip S. Yu of the University of Illinois Chicago, USA; Prof. Yu Tsao of Academia Sinica, Taiwan; Prof. Ljiljana Trajkovic of Simon Fraser University, Canada; and Prof. Kazunori Komatani of The University of Osaka, Japan, who will share frontier perspectives from graph foundation models and speech to network security and dialogue systems.

The two-day program spans international and domestic oral and poster sessions, industrial tracks, special sessions, the Young Woman Star session, high-school sessions, the AI CUP and the NAPAI Agentic AI Campus Innovation Competition, and international and domestic panels, creating room for deep exchange among academia, research institutes, industry, and the next generation of talent.

TAAI has been held since 1995 and is one of the longest-running AI conferences in Taiwan, with bilateral exchange with the Japanese Society for Artificial Intelligence (JSAI); the International Track proceedings are published by Springer CCIS. This heritage belongs to every author, reviewer, session chair, committee member, and volunteer, and we sincerely thank you all, as well as our supporting, organizing, co-organizing, sponsoring, and cooperating organizations.

We invite you to make the most of these two days: step into sessions and ask questions, linger at the posters, and meet new friends over coffee and at the banquet. May this forest be where good ideas meet. We wish you a rewarding conference!

Beyond Words: Riemannian Geometry for Next-Generation Graph Foundation Models

Prof. Philip S. Yu

伊利諾大學芝加哥分校 傑出教授暨 Wexler 資訊科技講座教授（UIC Distinguished Professor and Wexler Chair in Information Technology, Department of Computer Science, University of Illinois Chicago）• ACM / IEEE / AAAS Fellow

ABSTRACT

Graph Foundation Models (GFMs) are poised to transform graph learning, yet substantial debate remains over how to construct a general-purpose GFM analogous to Large Language Models (LLMs). Traditional Graph Neural Networks (GNNs) struggle with memory retention, principled interpretability, and multi-domain adaptation, while graph serialization limits the direct application of LLMs, as linear tokens fail to capture the rich structural complexity of graphs. In contrast, Riemannian geometry provides a natural, mathematically principled framework for modeling graph structures, offering compatibility with semantic graph learning and LLM integration. In this talk, we argue that for graphs, geometry speaks louder than words. We introduce Riemannian Graph Foundations, which prioritize intrinsic graph geometry and endow models with endogenous capabilities for structural inference and generation, moving beyond simple representation-space transformations. Recent results on building a graph foundation model within Riemannian geometric space will be presented, highlighting how this approach lays the groundwork for next-generation graph intelligence.

Neural Speech Enhancement and Assessment and Their Applications in Assistive Oral Communication Technologies

曹昱 研究員（Prof. Yu Tsao）

中央研究院 研究員（Research Fellow, Academia Sinica, Taiwan）

摘要（ABSTRACT）

This presentation is divided into three parts. Firstly, we will discuss our recent advancements in neural speech enhancement (SE), a critical element in various speech-related applications. The primary objective of SE is to enhance speech signals by mitigating distortions caused by additive and convoluted noises, thereby improving human-human and human-machine communication efficacy. We'll delve into the system architecture and fundamental theories behind neural SE approaches, as well as explore important directions aimed at achieving better performance. Moving on to the second part, we will focus on our recent progress in neural speech assessment (SA), which aims to effectively evaluate the quality and intelligibility of spoken audio—a crucial aspect in numerous speech-related applications. Traditionally, the evaluation process often relies on listening tests involving human participants, which can be both resource-intensive and impractical due to the need for a large number of listeners. To address this challenge, neural SA metrics have garnered notable attention. We will discuss the fundamental systems of neural SA, highlight several factors influencing performance, and explore emerging trends in this domain. Finally, we will present some applications of neural SE and SA in assistive oral communication technologies. These applications include impaired speech transformation and noise reduction for assistive hearing and speaking devices. Through these discussions, our aim is to illustrate the potential impact of neural-based approaches in improving communication accessibility for individuals with oral communication disorders.

AI-Driven Network Traffic Analysis for Anomaly Detection and Cybersecurity

Prof. Ljiljana Trajkovic

加拿大西門菲莎大學 教授（Simon Fraser University, Canada）• IEEE Fellow

摘要（ABSTRACT）

Collection and analysis of data from deployed networks is essential for understanding communication networks. Hence, data mining and statistical analysis of network data have been employed to determine traffic loads, analyze patterns of users' behavior, predict future network traffic, and detect traffic anomalies. The Internet has historically been prone to failures and attacks that significantly degrade its performance, affect the Internet connectivity, and cause routing disconnections. Frequent cases of various cyber threats have been encountered over the years and, hence, detection of anomalous behavior is a topic of great interest in cybersecurity. In described case studies, traffic traces collected by various collection sites are used to classify network anomalies. Various anomaly and intrusion detection approaches based on machine learning have been employed to analyze collected data. Deep learning, broad learning, gradient boosted decision trees, and reservoir computing algorithms were used to develop models based on collected datasets that contain Internet worms, viruses, power outages, ransomware events, router misconfigurations, Internet Protocol hijacks, and infrastructure failures in times of conflict. The reported results indicate that while performance of machine learning models greatly depends on the used datasets, they are viable tools for detecting the Internet anomalies.

講者簡介（BIOGRAPHY）

Ljiljana Trajkovic received the Dipl. Ing. degree from University of Pristina, Yugoslavia, the M.Sc. degrees in electrical engineering and computer engineering from Syracuse University, Syracuse, NY, and the Ph.D. degree in electrical engineering from University of California at Los Angeles. She is currently a professor in the School of Engineering Science, Simon Fraser University, Burnaby, British Columbia, Canada. Her research interests include communication networks and dynamical systems. Dr. Trajkovic served as IEEE Division X Delegate/Director, President of the IEEE Systems, Man, and Cybernetics Society, and President of the IEEE Circuits and Systems Society. She serves as Editor-in-Chief of the IEEE Transactions on Human-Machine Systems. She is a Distinguished Lecturer of the IEEE Systems, Man, and Cybernetics Society and was a Distinguished Lecturer of the IEEE Circuits and System Society. She is a Fellow of the IEEE.

Getting to Know You: Long- and Short-Term Adaptation in Dialogue Systems

Prof. Kazunori Komatani

日本大阪大學產業科學研究所 教授（SANKEN, The University of Osaka, Japan）

摘要（ABSTRACT）

Large language models have made dialogue systems capable of generating fluent responses. However, being good with words is not the same as understanding the person one is interacting with. A dialogue agent should adapt not just to any user, but to the particular person it is talking to, whose knowledge, experiences, and feelings differ from those of others. In this talk, I will discuss our research on user-adaptive spoken dialogue systems from two complementary perspectives. The first is acquiring knowledge through interaction, particularly learning unfamiliar words by deciding when, what, and how to ask users. The second is understanding users' current states through multimodal sentiment estimation, using information from speech, facial expressions, and physiological signals. I will also discuss how these research topics relate to recent developments in agentic AI, particularly from the perspectives of state representation and action selection.

講者簡介（BIOGRAPHY）

Kazunori Komatani is a Professor at SANKEN, the University of Osaka, Japan. He received his Doctor of Informatics degree from Kyoto University in 2002. He was an Assistant Professor at Kyoto University from 2002 to 2010 and an Associate Professor at Nagoya University from 2010 to 2014. He was also a Visiting Scientist at Carnegie Mellon University from 2008 to 2009. He joined SANKEN as a Professor in 2014. His research interests include spoken dialogue systems, dialogue management, user adaptation, and multimodal sentiment analysis.
